Dosing Information

Some of the most common questions we receive during follow up appointments are dosing related.

When it comes to CBD it is important to remember that there is a cumulative effect in the body and many patients see a drastic benefit after 6 weeks of continued use.

There is also no maximum dose for CBD and it is common for patients to use 1mL 3x daily to reach their desired symptom relief.

In terms of time, ingesting and vaporizing will vary significantly, both in terms of onset and total duration.

When vaporizing your cannabis, the onset is instant and usually lasts for 2-3hrs. When you ingest your cannabis, you can expect an onset of 1-3hrs with effects lasting anywhere from 6-8hrs.

Some of our patients, with more extreme conditions, are finding relief vaporizing while waiting for their ingested treatment to activate.
